

ER20 | Universal HI-FI earplugs

The goal of these Hi-Fi earplugs was the same as for Musicians Earplugs: to reduce noise but preserve sound quality; in effect, to turn down the noise but not muffle voices, environmental sounds or music. These high-fidelity earplugs were developed to provide low-cost, one-size-fits-most earplugs that reduce noise by approximately 20 dB.

ER-20's use a tuned resonator and acoustic resistor to give essentially equal sound reduction to preserve the fidelity of the original sound. Due to the flat frequency response they can be used in various music applications.

Features:

- One-size-fits all
- LOW COST
- Flat attenuation
- Sound quality is preserved

Available in a variety of colors.
