

Short Range Ear Muff - SM1xSR

Now you can communicate clearly and safely within short range distances (up to 50 metres) with the new Short Range Ear Muff utilizing the patent pending SENS (speech enhancement, noise suppression) technology that isolates and enhances speech whilst suppressing dangerous background noise.

No need to connect to other communication devices, the new SM1xSR enables ear muff to ear muff communication in high noise environments with all the benefits of the SENS technology.

Featuring a rugged design for heavy duty and general use, the SM1xSR earmuffs are simple to use, extreme comfort communication devices that not only allow ear muff to ear muff communication beyond 85dB (A) but also face to face, two-way or mobile phone - all without the need to remove hearing protection.

Combining Bluetooth technology with advanced SENS technology and a noise cancelling boom mic, the SM1xSR earmuffs offer the highest level of voice communication available on the market, with optimised hearing and speech clarity.
