

2-IN-1 STEREO HEADSET

Ear-O-Tec are proud to provide motorcyclists, cyclists, joggers, plane travelers and many others with professional quality stereo headsets to deliver clear sound through custom made ear plugs, even whilst travelling at speed.

Our unique design also allows you to disconnect the wires and use the devices as highly effective ear plugs. These can comfortably be worn under a helmet with and without the wires. In addition to this unique feature, we also provide you with a choice of various attenuation filters that will allow you to hear important sounds such as traffic and voices whilst on the road. The sound is delivered directly into the ear through black or clear coiled tubing connected to your custom made ear plugs. These plugs are available in various colors. The headset can be connected with a standard 3.5mm connector to a variety of applications such as an iPhone, iPod and many others.

This is a cost-effective alternative to electronic in-ear devices with the added advantage of having the ability to remove the wiring and use the ear plugs as filtered hearing protection without completely isolating you from your environment.
